                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2609
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to proteins capable of the enzymatic conversion of 2C-methyl-D-erythritol-2,4-cyclodiphosphate to 1-hydroxy-2-methyl-2-butenyl-4-diphosphate. The proteins are useful in screening a chemical library for inhibitors of isoprenoid biosynthesis. Cells and organisms that express them are useful for in vivo/in vitro production of isotopically labeled biosynthetic intermediates and products of the mevalonate-independent pathway of isoprenoid synthesis. Such intermediates and products are used to screen for genes, enzymes or inhibitors of isoprenoid/terpenoid biosynthesis, potentially useful as antibiocites, antimalarials and herbicides and as immunostimulaeors, particularly for treating bacterial infection. Antibodies against the intermediates are useful for detecting pathogens, in body fluids. The intermediates are useful for detecting pathogens, in body fluids. The intermediates are coding sequence used in the exemplification of the

The proteins are useful in screening a chemical library for inhibitors of isoprenoid biosynthesis. Cells and organisms that express them are useful for in vivo/in vitro production of isotopically labeled biosynthetic intermediates and products of the mevalonates and products are useful for some products of the intermediates and products are used to screen for genes, enzymes or inhibitors of isoprenoid/terpenoid biosynthesis, potentially useful as antibiotics, antimalarials and herbicides and as immunostimulators, particularly for treating bacterial infection. Antibodies against the intermediates are useful for detecting pathogens, in body fluids. The present sequence is a coding sequence used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New proteins involved in isoprenoid biosynthesis, useful in screening for inhibitors, also new intermediates, potential therapeutic agents, nucleic acids and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Biosynthesis, enzyme; antibacterial; protozoacide; herbicide; isoprenoid; inhibitor; immunostimulant; gene; ds.

                                                                                                                                                                                                                                                                                                            The invention describes the preparation of carotenoid pigments e.g. canthaxanthins using a cell transformed by a vector having DNA sequences (a) to (e) or substantially homologous sequences. (a) a DNA sequence (crtb) coding GGPP synthase of Flavobacterium sp. R1534; (b) a DNA sequence (crtl) coding prephytoene synthase of Flavobacterium sp. R1534; (c) a DNA sequence (crtl) coding phytoene desaturase of Flavobacterium sp. R1534; (d) a DNA sequence (crtl) coding lycopene cyclase of Flavobacterium sp. R1534, and (e) a DNA sequence (crtW3096) coding beta-carotene beta-oxygenase of a microbe E-396 (FREM BP-4283). The carotenoid or a carotenoid mixture can also be used in preparation of food products. The method is an improved method of fermentation for carotenoid
                                                                                                                                                                                                                     fermentation with transformed cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GGGCGCGCTGCTGAAGGACCGCGAAGGGCGGATCGCAATACATGAGCCATGATCTGCTG

The invention describes the preparation of carotenoid pigments e.g. canthaxanthins using a cell transformed by a vector having DNA sequences (a) to (e) or substantially homologous sequences. (a) a DNA sequence (crtE) coding GGPP synthase of Flavobacterium sp. R1534; (b) a DNA sequence (crtE) coding prephytoene synthase of Flavobacterium sp. R1534; (c) a DNA sequence (crtI) coding phytoene desaturase of Flavobacterium sp. R1534; (d) a DNA sequence (crtY) coding lycopene cyclase of Flavobacterium sp. R1534, and (e) a DNA sequence (crtW2396) coding beta-carotene beta-oxygenase of a microbe E-396 (FRM BP-4283). The carotenoid mixture can also be used in preparation of food products. The method is an improved method of fermentation for carotenoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           fermentation with transformed cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        esececerecreaageacceceaaeeecearcecaaracareaccarearearere

Genomic DNA (AAT45143) of Flavobacterium sp. R1534 includes genes of the carotemoid biosynthesis pathway. The sequence was deduced from inserts of clones obtd. from genomic libraries e.g. by PCR amplification (see also AAT45144-45) and use of partial clones to screen the library. The identities of the gene products (see also AAW6513-19 and AAW00871) were detd. by examining carotemoid accumulation in E. coli hosts transformed with delted variants of the gene cluster. The isolated genes can be used in different combinations to produce carotemoids in transformed host cells. (Updated on 17-OCT-2003 to standardise OS field)
                                                               Flavobacterium gene sequences encoding carotenoid biosynthesis enzymes for the production of carotenoid(s), useful in foods and animal feeds.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
